

ABSTRACT OF THE DISCLOSURE

The present invention provides a display screen based on a display pattern of an image processing apparatus.

Instruction data in which process information representing as a series of processes at least one process performed to document data and UI information for setting execution contents of the processes are described is acquired, and the UI information is extracted. A screen structure is generated on the basis of the UI information, and a screen of screen information obtained by reflecting the setting information on the screen structure is displayed. In this manner, a display screen having versatility and expandability can be provided.
